

Project #1 Report: ARP Scanner Using Python

Objective

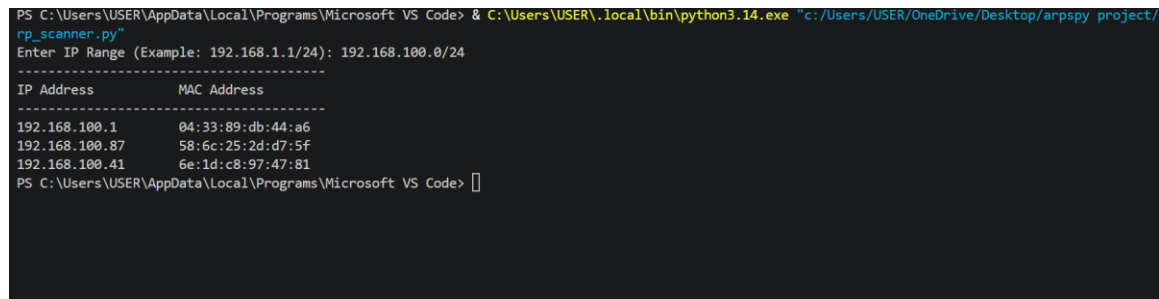

Develop an ARP Scanner using Python and Scapy to discover active devices on a local network.

Tools

- Python 3
- Scapy
- Visual Studio Code
- Windows

Capture the output screenshot

Screenshot:

```
PS C:\Users\USER\AppData\Local\Programs\Microsoft VS Code> & C:\Users\USER\local\bin\python3.14.exe "c:/Users/USER/OneDrive/Desktop/arpspy_project/rp_scanner.py"
Enter IP Range (Example: 192.168.1.1/24): 192.168.100.0/24
-----
IP Address      MAC Address
-----
192.168.100.1   04:33:89:db:44:a6
192.168.100.87  58:6c:25:2d:d7:5f
192.168.100.41  6e:1d:c8:97:47:81
PS C:\Users\USER\AppData\Local\Programs\Microsoft VS Code> 
```

Conclusion

The project demonstrates basic network discovery using ARP requests with Python and Scapy.
